

Green recovery

DNOA Decision
Reinforce

Scheme description

A number of reinforcement schemes are planned or are currently underway across NGED's four licence areas as part of the Green Recovery initiative.

This investment is aimed at unlocking network capacity to prevent barriers for customer connections and support the country's net zero ambitions. As these projects are aimed at unlocking capacity critical for net zero and most are already under construction, they are unsuitable for deferral using flexibility.

The following Green Recovery schemes are being progressed on the EHV and 132 kV networks in NGED's four licence areas:

East Midlands

Tamworth MSA
Tibshelf MSA
East Croft primary

South Wales

Pont Abraham MSA
Magor 11 kV

West Midlands

Michaelwood MSA
Stafford North MSA

South West

Victoria primary
Newquay Tren creek
primary
Bridgewater BSP
Truro BSP
