

Company Directive

STANDARD TECHNIQUE: SD8B/3 (Part 2)

Relating to 11kV Underground Cable Ratings

Policy Summary

This document contains 11kV cable ratings of the various types of 11kV cables used within Western Power Distribution South West and South Wales areas. It assumes that the cables will be subjected to the cyclic load as given by the load curve shown in figure one. If other load curves are required contact the Company Cable Engineer.

This Standard Technique should be used when designing any 11kV electricity distribution network that has underground cables in it.

Author: **Peter White**

Implementation Date: **March 2009**

30-03-09

1.0 INTRODUCTION

This Standard Technique replaces Standard Technique ST: SD 8B/2.

This Part 2 document of ST: SD 8B sets out the all the WPD, 11kV underground cable Sustained ratings, Cyclic ratings and Distribution ratings for winter, spring, summer and autumn which are to be applied. These ratings are based on Crater for MV Cables.

2.0 UNDERGROUND CABLES

The main factors governing the rating of underground cables are: -

Maximum depth of lay;

Soil thermal resistivity Tr (g);

Ground ambient temperature ($^{\circ}$ C);

Air ambient temperature ($^{\circ}$ C);

Cyclic loading conditions;

Maximum permissible conductor temperature;

Proximity to other cables;

Whether the cable is laid direct in the ground, in ducts or in air.

Duct dimensions

3.0 CRITERIA

3.1 General criteria for 11kV cables (applies to Paper, EPR and XLPE cables)

A winter soil resistivity of 0.9 $^{\circ}$ Cm/W and a summer soil resistivity of 1.2 $^{\circ}$ Cm/W are considered realistic for the South West and South Wales, although the possibility of localised higher values may need to be taken into account. To control the thermal resistivity of the surrounding medium then the best example would be to use cement bound sand (CBS) backfill for a cable route, but this is expensive. Generally crushed Limestone dust or crushed Granite dust 3mm to dust is suitable as this gives a Tr of 1.2 $^{\circ}$ Cm/W.

Ground ambient temperatures across the South West and South Wales vary between 7 $^{\circ}$ C in the winter and 15 $^{\circ}$ C in the summer. These values apply in most locations, but winter ground temperatures in the city centres such as Bristol, Cardiff, Exeter, Plymouth and Swansea will be about 2 $^{\circ}$ C higher.

3.2 The current ratings quoted in this document are maximum values and based on balanced loads.

- 3.3 The current ratings quoted apply to cables supplying loads, during the requisite season.
- 3.4 The current ratings specified are to be adjusted where the conditions are known to vary from those quoted in this instruction i.e. high summer loads or grouping.
- 3.5 The maximum conductor temperature for paper cable is 65°C. The maximum conductor temperature for EPR and XLPE cables is 90°C.
- 3.6 When two or more cables or trefoil groups are laid in the same trench then a derating factor needs to be applied to both circuits. The amount of derating is dependant upon the spacing of the circuits. All spacing distances quoted in this document are **centre-to-centre** spacing's of the cables or trefoil groups.
- 3.7 Only 11kV Ratings are now included in this document.
- 3.8 The ratings are detailed as **Sustained** - Winter, Spring, Summer and Autumn; **Cyclic** - Winter, Spring, Summer and Autumn; **Distribution** - Winter, Spring, Summer and Autumn; for each of the cable types included in this document.
- 3.9 Each cable type for which ratings have been generated the typical assumed installation conditions are given in the formation shown below: -

Depth of lay 0.6m;

Soil resistivity of 0.9°Cm/W;

Ground ambient temperature of 10°C;

Maximum conductor temperature of 65°C for 11kV for 3 core paper cables and 70°C for 11kV single core paper cables. All polymeric cables e.g. EPR and XLPE have a maximum conductor temperature of 90°C.

No allowance made for grouping of cable circuits.

4.0 DEFINITIONS

All 11kV EPR triplex circuits, for the purpose of this document, have been assumed to be three single-core polymeric cables laid touching, throughout their length, in trefoil formation. That the copper wire screens or the lead sheaths of the cables have been solidly bonded together at each straight joint position in addition the screens are solidly bonded together and earthed at both ends of the circuit.

It should be noted that when triplex or single core cable, which has been laid in trefoil, a maximum of 12% of the TOTAL ROUTE LENGTH, can be laid in flat space configuration without affecting the trefoil rating. If more than 12% of the Total Route Length is laid in flat space configuration then high circulating currents will flow in the copper wire screens or the lead sheath of the single core cables. This must be avoided. If the 12% cannot be achieved then contact the Company Cable Engineer at Avonbank.

4.1 Sustained, Continuous or Steady-State rating

The sustained rating is the maximum current that can be carried, in defined conditions, without the assumed maximum conductor temperature being exceeded.

4.2 Cyclic rating

A cyclic rating is the maximum current that maybe carried during the prolonged application of a succession of identical 24-hour load cycles, without the assumed maximum conductor temperature being exceeded.

4.3 Distribution rating

Distribution ratings are ratings calculated for stated conditions commonly occurring on distribution systems. The tabulated ratings given are 3 to 5 day limited time cyclic ratings.

The basis of the Distribution ratings is given below: -

Quantity and value assumed in calculating Distribution Ratings	Conditions for which valid.
Assumed maximum conductor temperature	90°C
Depth of Laying 0.8m	Nominal laying depth, direct or in ducts.
Soil Ambient Temp. 10°C	Winter peak loads in UK.
Soil Thermal resistivity for cables laid direct or in ducts $g = 0.9^{\circ}\text{C.m/W}$	(a) Summer load not greater than 75% of winter load. (b) Either special measures taken for difficult soils OR increased risk accepted.
Soil Thermal Diffusivity needed for transient conditions $0.5 \times 10^{-6} \text{ m}^2/\text{s}$	$G = 0.9^{\circ}\text{C.m/W}$
Ambient conditions Cables in Air 10°C Solar gain neglected	(a) Maximum load in winter. (b) Heating from adjacent equipment not excessive. (c) Shielded from the sun.
Other Heat Sources None	No allowance made for grouping.
Cyclic Loading For cables laid direct or in ducts 24 hr load cycle.	Daily cyclic load typical domestic/commercial type.
Limited-time Rating Normal conditions restored after 3 – 5 days.	Two-feeder open-ring operation.

4.4 Utilisation factor

The percentage of a cable's distribution rating which is not exceeded during its normal operational condition. Distribution ratings are based on an initial cable utilisation of 50%; if a circuit has a higher utilisation factor such as 75% then the Distribution rating must be reduced by 2.5%.

4.5 Load Factor

The ratio of the number of units supplied during a given period, to the number of units that would be supplied, had the maximum demand been maintained throughout that period. This is usually expressed as a percentage.

4.6 Soil thermal conductivity

The soil thermal conductivity is the thermal transmission in unit time through unit area of homogeneous soil of unit thickness, when unit difference of temperature is established between its surfaces.

4.7 Soil thermal resistivity

The ratings given are calculated for a damp thermal resistivity, which is suitable for rating cables for winter-peak loads.

4.8 Ground ambient temperature

Where a cable circuit carries a sustained load and does not have a seasonal variation it should be rated for the maximum summer value of ground temperature.

4.9 Ducts

A duct up to 15m in length can be used without derating the cable. Two or more duct lengths can be used on a section, provided that there is no more than 30m of duct in a particular 250m cable section and that there is a minimum of 10m separation between each duct length. See the example given below.

Example of two 15m-duct lengths in a 250m-cable section.

The correct duct rating shall be used if 15m or more of continuous duct is installed on a particular 250m-cable section. This rating is dependant upon the type of ducting used, for this reason the ratings given in the tables contain values for both smooth walled "PVC" and "Rigiduct" (Rigiduct is a twin walled duct) type ducting.

The rating of the cable section can be restored if the ducts are bentonited after the cables have been installed. To ensure the thermal equivalence to the direct buried parts of the route, the ducts shall be completely filled with a bentonite-sand-cement mixture.

The filling medium shall be prepared by adding 20 parts of sand and 8 parts of cements, by weight, to 100 parts of a 10:1 water/bentonite mixture.

Note: - Provided the bentonite is sealed into the duct with duct seals, and then the bentonite forms a gel, which is stabilized by the cement, and the addition of sand increases the load-bearing properties of the mixture. Should it be necessary to remove this mixture, it may be flushed out of the ducts by using high-pressure water jets.

Ducts, which are filled with a bentonite mixture, shall be installed wherever possible in a concrete surround but if not, any joints in the duct run must be effectively sealed. At the duct ends, the gap around the cable must be effectively sealed to prevent migration of the bentonite mixture and preserve its moisture content under service conditions.

In general duct lengths of up to 100m can be filled where a standard 150mm nominal bore duct is installed.

4.10 **Cables exposed to the sun**

To reduce the effect of solar radiation it is recommended that cables should be shielded from direct rays of the sun without restriction of ventilation.

4.11 **Effects of grouping of cables**

No allowance has been made for grouping in the ratings listed in the tables. Use the correction factors given in Table 1 for various grouping arrangements.

When two or more circuits of the same voltage are laid in close proximity the ratings of the cables must be reduced by multiplying the group-rating factor given in Table 1 with the relevant cable rating selected from this document. It should be noted that if thermally independence of both the circuits is required, then the circuits need a centre-to-centre spacing of 2.5m.

All spacing quoted in Table 1, are a centre-to-centre spacing for the relevant circuits.

4.12 **Loading Conditions**

All the ratings listed in this document are calculated for a particular typical domestic/commercial daily load curve, having a loss load factor of 0.5. See Figure 1 for the load curve.

Ratings given for cables installed in air and clipped direct to a wall are the steady-state ratings. Cables installed in this manner do NOT have a Cyclic or Distribution rating just their sustained or steady state rating.

5.0 **FURTHER GUIDANCE**

If required, further guidance should be sought from the Company Cable Engineer, Policy Section, Avonbank, Feeder Road, Bristol where necessary.

300mm ² Al.	625	574	548
			619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	1.05°C m/W
Ground Ambient Temperature	12°C
Air Ambient Temperature	12°C
Maximum Conductor Temperature	90°C
Utilization factor	50%

Ratings based on Crater for MV polymeric cables.

TABLE H3 sum

**11kV SINGLE CORE (OR TRIPLEX) E.P.R. INSULATED COPPER WIRE
SCREEN & M.D.P.E. OUTER SHEATH CABLES, LAID IN TREFOIL.** (Wet design)

Summer SUSTAINED Current Ratings

SIZE AND TYPE OF CABLE CONDUCTOR	SUSTAINED CURRENT RATINGS-AMPS			
	CABLE IN GROUND	CABLE IN DUCTS		CABLE IN AIR
<u>Metric sizes</u>		PVC	Rigiduct	
Copper conductors				
300mm ² Copper	573	504	476	786
630mm ² Copper	818	719	674	1204
Aluminium conductors				
70mm ² Al.	200	176	168	249
95mm ² Al.	239	210	200	303
150mm ² Al.	305	268	255	397
185mm ² Al.	346	304	288	457
240 mm ² Al.	400	352	333	538
300mm ² Al.	452	398	375	619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	0.9°C m/W
Ground Ambient Temperature	15°C
Air Ambient Temperature	15°C
Maximum Conductor Temperature	90°C

Ratings based on Crater for MV polymeric cables.

TABLE H3 sum

**11kV SINGLE CORE (OR TRIPLEX) E.P.R. INSULATED COPPER WIRE
SCREEN & M.D.P.E. OUTER SHEATH CABLES, LAID IN TREFOIL.** (Wet design)

Summer CYCLIC Current Ratings

SIZE AND TYPE OF CABLE CONDUCTOR	CYCLIC CURRENT RATINGS-AMPS		
	CABLE IN GROUND	CABLE IN DUCTS	CABLE IN AIR
Metric sizes		PVC	Rigiduct
Copper conductors			
300mm ² Copper	668	568	528
630mm ² Copper	970	824	756
Aluminium conductors			
70mm ² Al.	228	194	183
95mm ² Al.	273	233	219
150mm ² Al.	351	299	280
185mm ² Al.	399	340	318
240 mm ² Al.	464	395	368
300mm ² Al.	526	448	416
			619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	1.2°C m/W
Ground Ambient Temperature	15°C
Air Ambient Temperature	15°C
Maximum Conductor Temperature	90°C

Ratings based on Crater for MV polymeric cables.

SCREEN & M.D.P.E. OUTER SHEATH CABLES, LAID IN TREFOIL.** (Wet design)

Summer *DISTRIBUTION* Current Ratings

SIZE AND TYPE OF CABLE CONDUCTOR	DISTRIBUTION CURRENT RATINGS-AMPS		
	CABLE IN GROUND	CABLE IN DUCTS	CABLE IN AIR
<u>Metric sizes</u>		PVC	Rigiduct
<u>Copper conductors</u>			
300mm ² Copper	748	614	565
630mm ² Copper	1098	899	815
<u>Aluminium conductors</u>			
70mm ² Al.	252	207	194
95mm ² Al.	303	249	232
150mm ² Al.	391	321	298
185mm ² Al.	445	366	339
240 mm ² Al.	519	426	393
300mm ² Al.	590	484	445
			619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	1.2°C m/W
Ground Ambient Temperature	15°C
Air Ambient Temperature	15°C
Maximum Conductor Temperature	90°C

Ratings based on Crater for MV polymeric cables.

Autumn SUSTAINED Current Ratings

SIZE AND TYPE OF CABLE CONDUCTOR	SUSTAINED CURRENT RATINGS-AMPS			
	CABLE IN GROUND	CABLE IN DUCTS		CABLE IN AIR
<u>Metric sizes</u>		PVC	Rigiduct	
Copper conductors				
300mm ² Copper	605	524	493	786
630mm ² Copper	865	750	700	1204
Aluminium conductors				
70mm ² Al.	211	182	173	249
95mm ² Al.	252	218	207	303
150mm ² Al.	322	278	264	397
185mm ² Al.	365	316	298	457
240 mm ² Al.	422	366	345	538
300mm ² Al.	477	413	389	619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	1.1°C m/W
Ground Ambient Temperature	12°C
Air Ambient Temperature	12°C
Maximum Conductor Temperature	90°C

Ratings based on Crater for MV polymeric cables.

Autumn **DISTRIBUTION** Current Ratings

SIZE AND TYPE OF CABLE CONDUCTOR	DISTRIBUTION CURRENT RATINGS-AMPS		
	CABLE IN GROUND	CABLE IN DUCTS	CABLE IN AIR
<u>Metric sizes</u>		PVC	Rigiduct
<u>Copper conductors</u>			
300mm ² Copper	783	629	577
630mm ² Copper	1150	922	834
<u>Aluminium conductors</u>			
70mm ² Al.	262	211	197
95mm ² Al.	316	254	237
150mm ² Al.	408	328	304
185mm ² Al.	465	374	346
240 mm ² Al.	542	435	401
300mm ² Al.	617	496	455
			619

Note: - These rating are suitable for 11kV XLPE Triplex of similar construction.

Parameters

Maximum depth of lay	0.8m
Soil Thermal Resistivity (g)	1.1°C m/W
Ground Ambient Temperature	12°C
Air Ambient Temperature	12°C
Maximum Conductor Temperature	90°C

Ratings based on Crater for MV polymeric cables.

APPENDIX A

SUPERSEDED DOCUMENTATION

This document supersedes ST:SD8B/2 dated September 2003 which should now be withdrawn.

APPENDIX B

ASSOCIATED DOCUMENTATION

ST: CA6A/2 - Relating to the Installation of Underground Cables

APPENDIX C

IMPACT ON COMPANY POLICY

This Standard Technique has been updated to add all four seasons to the cable rating document instead of just having one season as given in the previous document. In addition the document has been broken up into manageable parts, with each part being for a particular voltage level.

APPENDIX D

IMPLEMENTATION OF POLICY

This Standard Technique shall be communicated to all relevant WPD Planning and Control staff at the next Team Briefing by the relevant Team Manager.

APPENDIX E

KEY WORDS

11kV Group Derating, Sustained Rating, Cyclic Rating, Distribution Rating, Laid Direct Rating, Duct Rating, Air Rating.
